

Technical Report Requirements:

1. Introduction (I):

- Clearly define the subject of your research.
- Describe the problem in the context of the project.
- Explain why it is important, necessary, and meaningful to address this problem.

2. Related Work:

- Summarize 20-25 research papers, primarily from the last 5 years.
- Describe the principles of the solutions from these papers and how they address the problem.
- Identify the strengths and weaknesses of these solutions.
- Build a classification table that compares these solutions, focusing on technological factors.
- **All references should be cited in IEEE style** (e.g., [1], [2], [3]).

3. Proposed Solution:

- Provide a detailed description of the proposed solution.
- Explain how the solution will be implemented.
- Include **high-quality images** (e.g., diagrams, flowcharts, system architectures) to illustrate your solution and its components clearly. Ensure images are properly labeled and referenced within the text.

4. Results and Evaluation:

- Present the results of your implementation in different scenarios.
- Include **visual aids** such as graphs, charts, or tables to represent the results.
- Compare and analyze the results based on experimental findings.

5. References:

- Include a list of all cited references at the end of the report, formatted according to the IEEE citation style.
- Make sure to cite images, diagrams, and other sources appropriately if they are not originally created by your team.

6. Length:

- The report should not exceed 15 A4 pages, including images and references.
